## Download Kibana

Want it hosted? Deploy on Elastic Cloud. [Get Started »](#)

Version: 7.4.0

Release date: October 01, 2019

License: **Elastic License**

Downloads: [⬇ WINDOWS sha asc](#) [⬇ MAC sha asc](#)  
[⬇ LINUX 64-BIT sha asc](#) [⬇ RPM 64-BIT sha asc](#)  
[⬇ DEB 64-BIT sha asc](#)

## Installation Steps

New around here? View our [getting started page](#) to get acquainted with the Elastic Stack.

1

Download and unzip Kibana

Kibana can also be installed from our package repositories using apt or yum. See [Repositories in the Guide](#).

2

- Open `config/kibana.yml` in an editor
- Set `elasticsearch.hosts` to point at your Elasticsearch instance

3

Run `bin/kibana` (or `bin\kibana.bat` on Windows)

4

Point your browser at `http://localhost:5601`

5

Dive into the [getting started guide](#) and [video](#).
