Sandbox - Overview

5 Most Active Products

oauth2-provider-api-product (3/8/2021 00:00:00) > 1 events

Timestamp	Method	Path	Count
3/8/2021 11:09:24	GET	/bank1juloparicom-dev/sb/v1/provider/oauth2/authorize	302

The screenshot displays the IBM API Connect Analytics interface. At the top, a breadcrumb trail reads: "5 Most Active Products > oauth2-provider-api-product (3/8/2021 00:00:00) > 1 events > 3/8/2021 11:09:24, GET, /bank1juliopari-com-dev/sb/v1/provider/oauth2/authorize, 302". Below this, a table view shows a single JSON record for an API call. The record includes fields such as "api_id", "app_type", "bytes_received", "client_id", "billing", "provider", "currency", "model", and "trial_period_days".

The main dashboard area shows a summary card for "API Calls" with a large "51" and the word "Count" below it. Below the card, it indicates "All Events > 51 events > 2/8/2021 17:03:34, POST, /bank1juliopari-com-dev/sb/oauth2-openid-redirect/oauth2/token, 400". A second table view shows a JSON record for this event, including details like "date_time", "time_to_serve_request", "uri_path", "log_policy", "endpoint_url", "product_id", "host", "client_ip", and "app_id".
