

IBM Docs: <https://apic-api.apiconnect.ibmcloud.com/v2018/#/documentation/introduction>

The screenshot shows the IBM API Connect v2018.4.1.x documentation interface. The top navigation bar includes 'IBM API Connect' and 'API Connect v2018.4.1.x'. The left sidebar has a tree view with nodes like 'Introduction', 'Concepts', 'Authentication', 'Obtaining a Client ID and Secret', 'Getting and Using a Bearer Token', and 'IBM API Connect Platform - Cloud Management API ...'. A search bar at the top has 'Q' and buttons for 'Expand all' and 'Collapse all'. The main content area has a blue header 'Open API Explorer Documentation'. Below it, a section titled 'Introduction' contains a paragraph about the platform REST APIs. A red box highlights the first sentence of this paragraph.

The platform REST APIs documented here for IBM API Connect 2018 provide complete access to the capability used to automate administration of the platform; for scripts and tools to support a continuous integration environment and publishing; and for management of catalogs of APIs and their subscribers. The operations provided in the F directly with commands in the toolkit CLI.
