

**Crypto Module:**

<https://www.ibm.com/docs/en/datapower-gateway/10.0.1?topic=apis-crypto-module>

El parámetro «key» se debe pasar a buffer ya que HMAC esperar una key de 160 bits

**Código**

```
var crypto = require('crypto');
var key = new Buffer("a73e3406e7dcc5fc168d9ae9954ec6e0d85e4444");

var hmac = crypto.createHmac('sha256', key);
var input = "This is plaintext to hash";
var result = hmac.update(input).digest('base64');

session.output.write(result);
```

**Salida**
