IBM® DataPower® Operations Dashboard delivers an advanced operations console for centralized problem determination and advance monitoring of the DataPower infrastructure.

Documentación 2021:

<https://montier.atlassian.net/wiki/spaces/DPOD011000/pages/454066848/Web+Console>

The DataPower Operations Dashboard includes the following features

- Self-service console for developers to troubleshoot their own services
- Ability to view transaction details across one or more DataPower Gateways
- Customizable dashboards for displaying key operational data
- Ability to create ad hoc or scheduled reports for chargeback reporting or service level agreement (SLA) compliance
- Full-text search with advance filters to find transactions and configuration
- Help for identifying security compliance issues from service errors
