

Connecting to WebDAV for working with portal themes and skins

The portal contains the WebDAV service and enablement layer. Before using WebDAV for WebSphere Portal, you need to set up your WebDAV client. After you have set up the WebDAV client, you can connect to WebDAV and work with portal themes and skins. To connect to WebDAV for WebSphere Portal, enter the WebDAV entry URL as follows:

Theme Administration:

- For working with themes in an administrative perspective (such as creating a new theme, deleting a theme, modifying the title) connect by using the following WebDAV entry URL:

```
http://<server>:<port>/wps/mycontenthandler/dav/themelist/
```

If you want a specific theme rather than the full list of themes, you can add the friendly name, unique name, or object ID of the theme to the URL above.

Skin Administration:

- For working with skins in an administrative perspective (such as creating a new skin, deleting a skin, modifying title) connect by using the following WebDAV entry URL:
- ```
http://<server>:<port>/wps/mycontenthandler/dav/skinlist/
```
- If you want a specific skin rather than the full list of skins, you can add the friendly name, unique name, or object ID of the skin to the URL above.

### Theme file store:

- For working with themes, skins, common resources, layouts, iwidget definitions (such as modifying a theme, skin, layout template) connect by using the following WebDAV entry URL:
- ```
http://<server>:<port>/wps/mycontenthandler/dav/fs-type1/
```
