

En este post vamos a ver los pasos necesarios para tener un ambiente en local de DataPower. En internet existen una serie de videos en ingles y sin pasos actualizados a la fecha (Nov 2017), así que aquí he elaborado 2 videos donde se muestra todo el proceso de instalación en español.

The screenshot shows the IBM WebSphere DataPower XI52 Control Panel interface. The browser address bar displays "https://192.168.227.135:9090". The page header includes "WebSphere. DataPower XI52", "admin @ AprendeIBM", "Domain: default", "Save Configuration", "Logout", and the IBM logo. The main content area is titled "Control Panel" and is organized into several sections:

- Services:** Includes icons for Web Service Proxy, Multi-Protocol Gateway, XML Firewall, Web Application Firewall, and XSL Accelerator.
- Monitoring and Troubleshooting:** Includes icons for View Logs, Troubleshooting, Web Services Monitor, and View Status.
- Files and Administration:** Includes icons for File Management, System Control, Import Configuration, Export Configuration, and Keys & Certs Management.

At the bottom, there is a section titled "Having trouble? Additional resources are available." with the following links:

- Access the [Documentation Portal](#) for IBM WebSphere DataPower appliances.
- Contact [IBM Support](#) to report a problem.
- Generate an [error report](#).

Julio Pari (IT Architect IBM)
