

Site Builder

Create site builder templates for either a full website or a section of a website. Site builder templates include pages, content, page hierarchy, libraries, theme selection and more. The Content Template Catalog includes page templates for your immediate use, or you can create your own page templates.

Summary Downloads/Releases Screenshots Documentation Feature Requests Defects Discussions Reviews

The Content Template Catalog v4.4 (CTC4.4) is a suite of assets that simplify and accelerate the process of building a website. It includes common page templates, content types and design elements - making it possible to build a basic site very quickly - with little or no customization. For more complex sites, CTC4.4 can be used to rapidly lay down the groundwork for the site with the templates and design elements easily tailored for your content. CTC4.4 is delivered as a Portal Application Archive, which is a package of IBM WebSphere Portal and IBM Web Content Manager assets and code, installed using the Portal Solution Installer. After installing this package you have a full templating system for building content-oriented WebSphere Portal sites.

The CTC4.4 is a suite of assets that simplify and accelerate the process of building a website. It includes common page templates, content types and design elements - making it possible to build a basic site very quickly - with little or no customization. Introduction

This document contains information relating to the installation and usage of the Content Template Catalog (CTC), version 4.4

Prerequisites

- WebSphere Portal 8.5 CF7 or higher must be installed.
- The default Derby Database used by WebSphere Portal is not supported for use with CTC. Instead you should perform a database transfer and use another supported database.

Installation

These are the instructions for a simple installation. This assumes that you are installing on a non-migrated system, to the base portal, that the server is a standalone system with no web server, and that you are installing the default Content Template Catalog components. For the full installation instructions for all other cases, refer to the product documentation.

- Extract CTCInstall.zip to a directory on the server where you want to install the Content Template Catalog.
- Customize the [ctc.properties](#) or [ctc-zos.properties](#) file to set the [PROFILE_DIR](#) parameter and specify which components to install. In particular, you may like to set the [CTC_USERS](#) and [CTC_MLS](#) parameters as [true](#).
- Set the administrator passwords in the [wkplc.properties](#) ([/opt/IBM/WebSphere/wp_profile/ConfigEngine/properties/wkplc.properties](#)) file, or the passwords can be added to the installation command line with the syntax: «-PortalAdminPwd password -WasPassword password».
- On Unix, make the installation program [ctc-install.sh](#) executable by running the command: «[chmod 777 ctc-install.sh](#)».
- Start the installation program from the command line by executing the command: «[ctc-install.bat](#)» (Windows), «[ctc-install.sh](#)» (Unix), or «[ctc-install-zos.sh](#)» (z/OS).
- Restart the server.

Documentation

The CTC 4.4 Documentation, which contains the complete prerequisites and installation documentation, is available here:
