Cuando estamos trabajando con una PT o un Script Portlet y necesitamos mostrar los contenidos de un Site Area, podemos listar los contenidos en el html de 2 formas, una creando un componente menu y listar los contenidos en un objeto JSON, adjunto capturas

▼ **Location**

◯ Libraries ⦿ Site Areas

For all selected and included site areas:

☐ Include ancestors

☐ Include descendants

Search for content items that are linked to these site areas: Add Site Areas ▼

Contenidos Web (AT y Contents) / Catálogo de Contenido Multireferenciado / Catalogo de Eventos ✖

▸ **Further options**

▼ **Menu design properties**

Display order:
⦿ Ascending
◯ Descending

Sort results first by: | Title ▼ | Then by: | Title ▼ | Then by: | Title ▼ |

Formatting:
⦿ Use default design fields
◯ Use a list presentation

▼ **List Paging Options**

Define the paging options for page navigation components used as part of this list presentation

Results per page: ⦾
| 100 |

Start page: ⦾
| 1 |

Maximum number of result pages:
| 100 |

Pages to read ahead: ⦾
| 100 |

List Presentation Markup

Use HTML to define how list results are presented to your site visitors, including a header, footer, and separator.

Header:

| Import | Export | Insert Tag | Insert Link | Insert Image |

```
var wcmEventos = {
        "eventos" : [
```

Result design:

| Import | Export | Insert Tag | Insert Link | Insert Image |

```
{
                "titulo":"[Element key="CT.Evento.Box.Titulo" type="auto"]",
                "image": "[Element key="CT.Evento.Box.Imagen" type="content"
context="autofill" rendition="auto" format="url" htmlencode="true"]",
                "categoria":"[Element key="CT.Evento.Box.Categoria" type="auto"]",
                "sede":"[Element key="CT.Evento.Box.Sede" type="auto"]",
                "region":"[Element key="CT.Evento.Box.Region" type="auto"]",
                "fecha": "[Element key="CT.Evento.Box.Fecha" format="yyyy-MM-dd"
type="auto"]",
                "enlace": "[Element key="CT.Evento.Box.Enlace" type="content"
context="autofill" rendition="auto" format="url" htmlencode="true"]"
}
```

Footer:

| Import | Export | Insert Tag | Insert Link | Insert Image |

```
]};
```

Separator:

| Import | Export | Insert Tag | Insert Link | Insert Image |

```
,
```

Luego en la PT o Script Portlet se debe insertar el elemento/componente y quedará así

```
<script type="text/javascript">
[Component name="plantillas de presentacion (pts y components)/codigo html para presentacion en listas (menu items)/personas home comfenalco contigo clic/menu.personashome.comfenalcocontigoclic"
    resultsPerPage="" startPage=""]
</script>
```

Y al pintar quedaría así

```
<script type="text/javascript">
var wcm_comfenalco_clic = {
    "lista_wcm" : [{
"titulo": "Catálogo en línea",
"imagen": "/wcm/connect/bff990fc-4e09-4cb3-a512-7c30a619c59c/credito-1.svg?MOD=AJPERES&amp;CACHEID=ROOTWORKSPACE-bff990fc-4e09-4cb3-a512-7c30a619c59c-mBTjFTP",
