Problema:

Mientras trabajo en mi proyecto TypeScript, me encuentro con el siguiente error:

```
Error: Debug Failure. False expression: Non-string
value passed to ts.resolveTypeReferenceDirective, likely by a wrapping
package working with an outdated resolveTypeReferenceDirectives
signature. This is probably not a problem in TS itself
```

Solución 1:

Primero actualizar Typescript:

`npm i typescript@latest`

y luego actualizar ts-node:

`npm i ts-node@latest`

Luego ejecutar `npm run dev`

Solución 2:

If solution 1 not working you can try this-

You have to update typeScript in your package.json file.

-first open your package.json file

-Underdependencies you can see there is typescript dependence present.

-Update its version to the very latest one 4.7.2.

-Then run npm install to get all packages & your error hopefully fixed

or-

You have to update ts-node-dev packages in your package.json file.

-first open your package.json file

-Under dependencies, you can see there is ts-node-dev dependence present.

[Solved] Typescript: Debug Failure. False expression: Non-string value passed to `ts.resolveTypeReferenceDirective` | 2

-Update its version to the very latest one **2.0.0-0**.
