

Cuando hemos modificado un archivo **theme.html** del tema estático (**wpsXYZThemeStatic**) y desplegamos el **EAR**, por defecto el tema está en cache y no veremos reflejado nuestro cambio a menos que reiniciemos wp\_profile, para no reiniciar y querer ver reflejado el cambio debemos **deshabilitar el cache** de los temas. Para esto seguir los siguientes pasos:

The screenshot shows a dropdown menu with the following items: Content, Collaboration, Messaging, Personalization, Unified Task List, Site Builder, and Theme Development. The 'Theme Development' item is highlighted with a yellow background.

The screenshot shows the 'Home' page of the WebSphere Portal. The page title is 'Home'. Below the title, there is a description: 'Use the analyzer to discover implementation details about your theme. For example, find where .'. There are several links and sections: 'Examine page profile information', 'Examine modules', 'Examine contributions', 'Examine capabilities', 'Validation Report 33', and 'Utilities'. The 'Utilities' link is highlighted with a yellow background.

## Utilities

### Export Theme Data

If you need help with a theme issue, you can export your data to a file. Export display data as a compressed file. [Click here to export data](#)

### Import Theme Data

Import theme data to analyze and troubleshoot issues from another theme.

Filename:  Ningún archivo seleccionado

### Control Center

Various system settings and modifications of the theme optimization.

### Client Tracing

Enable and disable tracing for client side javascript.

### Advanced Utilities

More system utilities around theme optimization

Home > Utilities > Control Center

## Control Center

### Invalidate Cache

This option allows to invalidate all theme optimization related caches such as profiles and modules. With this you can make changes to profiles or modules and after invalidating the caches the system will pick up the changes. [Click to invalidate.](#)
