

If your SystemOut.log is throwing the following warning message, it means that you will need to specific white and black list for your custom web application:

```
[3/24/16 12:18:17:143 SGT] 0000027f AbstractReque W  
com.ibm.wps.resolver.resource.AbstractRequestDispatcherFactory  
matchesWebAppDefault(aResource) Servlet context [/WebApp] does not  
specify a blackwhite list when accessing resource  
[themes/html/dynamicSpots/custom/header.jsp], falling back to the  
default  
[[whitelist(null), blacklist(WEB-INF/.*)]]. Applications can define a  
custom list by adding the  
keys [com.ibm.portal.resource.whitelist] and  
[com.ibm.portal.resource.blacklist] to their web.xml  
deployment descriptor. For details see information for APAR PI47714  
related to CVE-2014-8912  
(Security bulletin:  
http://www.ibm.com/support/docview.wss?uid=swg21963226).
```

Add the following parameters to your web.xml and redeployed your application:

<http://mygeekjourney.com/websphere-portal/websphere-portal-specify-white-black-list-web-application/>
